- Check local area for availability of other sizes.
- Loads shown include 50% superimposed dead load and 50% live load. Top tension stress at transfer has been allowed to exceed $6\sqrt{f'_c}$; therefore, top reinforcement is required.
- Loads can be significantly increased by use of structural composite topping.

Key

6510 – Superimposed service load capacity, lb/ft
0.2 – Estimated camber at erection, in.
0.1 – Estimated long-time camber, in.

Table of superimposed service load capacity, lb/ft, and cambers, in.

Strength is based on strain compatibility; bottom tension is limited to $12\sqrt{f'_c}$; see pages 3–8 through 3–11 for explanation.
